

FREQUENTLY ASKED QUESTIONS #Z136 CORK RUBBER FLOORING

Is Cork Rubber Flooring truly Green? Yes.

Cork Rubber flooring is made with approximately 65% cork by volume. The cork is recycled, post production waste and is a renewable resource.

The rubber content is synthetic virgin material, however due to its extreme durability, the product will last longer than other alternatives, therefore reducing waste from re-installation of product in a shorter period of time.

Cork Rubber qualifies for more LEED credits than many other types of flooring including solid rubber (doc #Z203).

Zandur offers a program to completely recycle tiles after their useful life (doc #Z204).

Why Choose Cork Rubber over Solid Rubber?

The addition of cork greatly enhances the character, texture and overall beauty of the floor.

Solid rubber contains little if any recycled content or renewable raw materials, thus it does not have the environmental benefits of cork rubber.

The addition of cork to the rubber actually increases product durability as it will compress and “give” during use vs. solid rubber which is harder and can scratch and gouge easier.

Cork rubber is more comfortable than solid rubber as it can compress under foot.

Cork Rubber provides superior slip resistance due to the cork particles that come to the surface of the material and provide a greater coefficient of friction even when wet.

What Makes Zandur different from other Cork Rubber and Solid Rubber products?

Zandur manufactures its products using only the highest quality components and uses a high percentage of rubber in its compound versus other product which are highly loaded with fillers.

Zandur uses extremely light fast pigments to virtually eliminate fading.

Zandur employs a full time director of production at the manufacturing location who is responsible for factory QC and post production QC procedures. Zandur makes a 100% inspection of tiles three times during the production process and prior to packaging.

Zandur does not simply purchase product and re-distribute it. Instead, we are the creators and innovators behind them. We develop our products and formulations, establish factory QC procedures and make regular audits ensuring environmentally safe practices, worker safety and effective management. This ensures you get the best quality product available.

Zandur Cork Rubber Flooring

Frequently Asked Questions #Z132

Should I expect shade variation in the product? Yes.

Because of the cork content, slight shade variance is expected and adds to the natural beauty of the product, however the product is sorted prior to shipping to ensure any variances is limited.

In the event the the end user/customer is not happy with the shade variance, Zandur will accept the material back at no charge according to Zandur's' return policy. Contact Zandur for details.

Is Cork Rubber durable? Yes.

Cork Rubber Flooring will last for decades if maintained per Zandur recommendations. Since the pattern and color run through the entire thickness of the product it will not lose its visual characteristics.

Rubber is known for its durability and the cork only adds to that.

Can Cork Rubber be stained from soda, red wine and other common liquids? Not Typically.

Cork Rubber is resistant to most chemicals that it will come in contact with including red wine and soda assuming spills are cleaned up within a reasonable amount of time.

For normal day to day use, materials spilled on the floor will not stain the rubber or the cork.

Refer to Zandur ASTM F925 testing available from your distributor for specific chemical resistance information.

Will the cork come out of the surface of the tile? No.

All cork in the product is embedded into the rubber and is securely bonded through the vulcanization/curing process.

Is a finish required for new installations of cork rubber? Its Highly Recommended

Though not required, the application Johnson Diversey Carefree Matte finish will provide additional protection against damage and significantly enhance the ease of maintenance. The finish is quickly applied by maintenance personnel using a mop and is ready to walk on immediately after application. This finish can be stripped and reapplied if desired.

Should I worry about product fading? No.

Because we use only color fast, stable pigments, fading is not likely in normal conditions.

Why Choose Zandur?

The owners of Zandur first introduced cork rubber flooring to the US in the late 90's and have been the leaders and innovators of this product since then. We have unparalleled experience in the development and manufacturing of cork rubber as well as over 60 years combined experience in cork. Choosing Zandur will ensure that you not only get the best product at the best price, but also ensure that a responsive and knowledgeable company stands behind the product.
